Allen-Bradley PowerMonitor 500

Product Description

The Allen-Bradley® PowerMonitor™ 500 can give you greater insight into energy consumption across the plant floor and enterprise-wide. Featuring an at-process display, the PowerMonitor 500 allows you to view energy data directly at the monitoring site without the need for additional human-machine interface (HMI) components. The local display provides instant and accurate sub-metering data to help keep you well-informed of how much power you use, what your major loads are and when you use power the most.

The PowerMonitor 500 features a compact, space-saving design which mounts directly on the panel door. Installation is simplified with on-device configuration. Offering digital or analog outputs and Serial Modbus or EtherNet/IP™ communications, the PowerMonitor 500 can be easily integrated into your existing energy monitoring systems. RSEnergyMetrix® software can further enhance your view into your energy spend. As part of an integrated network, the PowerMonitor 500 can easily communicate with your existing Allen-Bradley PLCs (PLC-5®, SLC™, ControlLogix® Compact/Control family), allowing energy data to be used in control systems.

The PowerMonitor 500 is a cost-effective sub-metering option, providing critical data that can help you make at-process decisions, reduce energy usage and increase your company's profits.
